INNOVATIVE DIAGNOSTICS

We help to protect both human health and the global food supply by offering diagnostic tests to detect zoonotic diseases in humans and animals, and veterinary diseases in farm animals.

MOLECULAR BIOLOGY

We offer a complete solution for molecular diagnostics from sample pre-treatment to final results. Our range for molecular biology includes extraction robots, nucleic acid purification kits using spin columns or magnetic beads, and ready-to-use amplification kits.

SEROLOGY

Our immunodiagnostic kits include all the necessary reagents for the analysis of serum, plasma, meat juice or milk samples. Tests are standardized to detect national and international reference sera, and show innovation through simplified test protocols, ready-to-use reagents, and improved test performance.

The veterinary range of Innovative Diagnostics

Our veterinary range for the control of infectious diseases in farm animals is marketed under the brand name IDvet.

SOFTWARE

IDSOFT™ DATA ANALYSIS PROGRAM

Software program providing convenient, flexible and comprehensive data analysis for livestock and avian ID Screen® ELISA kits.

- + Determine titres, vaccination age and baseline values for better preventative medicine for poultry. Facilitate data analysis for other species
- + Easily share your results : OD values may be exported to other formats, such as Excel
- + Optimize lab time and plan your testing schedule: the software provides you with an overview of the different tests to be run for each sample
- + Flexible: import data from your plate reader, from Excel, or enter them manually. Collect data and edit reports from multiple work stations
- + Customize your templates and reports, and incorporate your own company information and logo.

To download or obtain the software, please contact support.software@innovative-diagnostics.com.
